

DECK trades at 7.1x EV/LTM EBITDA with zero debt. Management's FY27 guide is net sales of \$5.86B to \$5.91B.

THESIS AT \$80.23

- Cheapest multiple in the peer set.** On stockanalysis numbers DECK trades at **7.4x** EV/EBITDA against an **11.4x** peer median. On GuruFocus numbers it trades at **7.6x** against its own 13.5x ten-year median. The FY28 to FY30 framework calls for high-single-digit sales growth and operating margin in the low 20s.
- FY27 at guidance, out-years below the framework.** FY27 growth of 7.5% equals the guide midpoint. FY29 and FY30 growth of 6% and 5% runs under the high-single-digit framework. Margin holds at 21.5% against a Jul 23 guide of slightly better.
- Cash generation funds the buyback.** FY26 free cash flow topped \$1B and DECK retired 10.5M shares for \$1.075B (8-K May 21 2026). HOKA grew +7.7% in Q1 FY27 with DTC +17% (10-Q). Zero debt.

VALUATION: FOUR METHODS

Four methods land above the price. The perpetuity DCF gives **\$131** and the 9.5x exit multiple gives **\$117**. Comps at the peer median give **\$122**. The Monte Carlo P10 to P90 band runs **\$112 to \$144**. The price implies a **12.6%** EBIT margin, held flat from FY27, against the 21.5% forecast. The perpetuity value implies a **104%** return on new capital, close to FY26's **100.5%** ROIC. At 25% it is **\$124**.

RISKS: HOKA GROWTH AND TARIFFS

- HOKA growth is decelerating.** HOKA net sales grew +23.6% in FY25 and +15.9% in FY26, per the segment note in the FY2026 10-K. The Q1 FY27 10-Q shows +7.7%.
- Tariff rate went from 10% to 12.5%.** On the Jul 23 2026 Q1 FY27 call, per SGI Europe coverage, the go-forward tariff rate moved to 12.5% from 10%.

CATALYSTS: Q2 FY27 AND HOLIDAY QUARTER

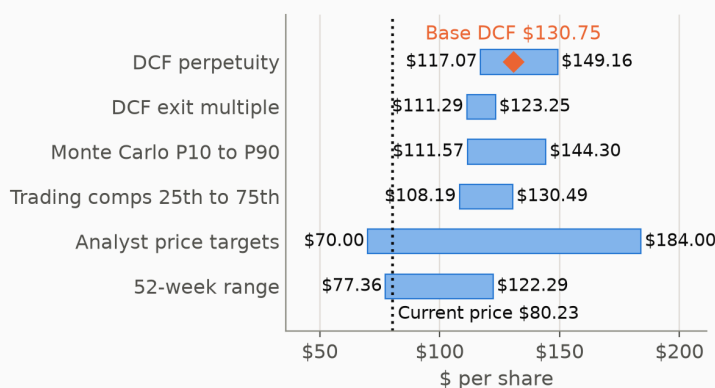

The Q2 FY27 report will show whether HOKA DTC growth holds after the +17% Q1 print (10-Q). Then the holiday quarter, UGG's seasonal peak. The EPS guide assumes buybacks of about 80% of FY27 free cash flow.

FINANCIAL SNAPSHOT, FY2024 TO FY2031 (\$M UNLESS NOTED)

	FY2024A	FY2025A	FY2026A	FY2027E	FY2031E
Net sales	4,288	4,986	5,472	5,883	7,286
Growth %	18.2%	16.3%	9.8%	7.5%	4.0%
EBIT margin %	21.6%	23.6%	23.1%	21.5%	21.5%
EBITDA	985	1,248	1,339	1,347	1,668
FCFF				936	1,177

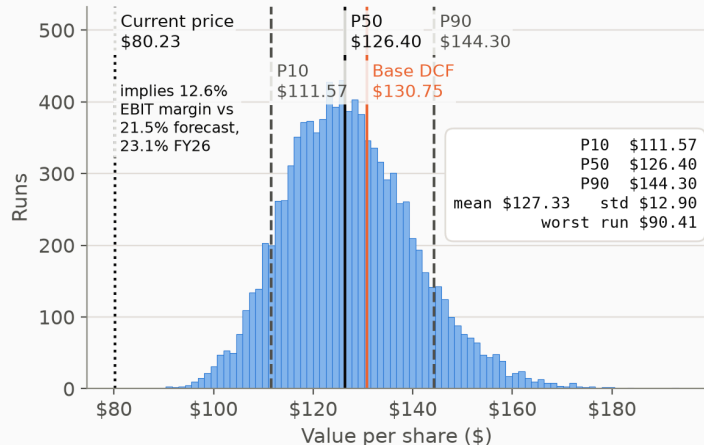

Actuals come from the Historical tab, sourced to the 10-K FY2026 and 10-K FY2024, and forecast years come from the DCF tab. FCFF is a forecast-only line.

DECK: valuation summary (\$ per share)

Each bar runs low to high. The dotted line marks the current price and the diamond the \$131 base DCF, while the analyst-target and 52-week bars come from stockanalysis.com and the other four from the model.

DECK: Monte Carlo value per share (10,000 runs)

10,000 independent draws over growth, margin, WACC and terminal g, each repriced through the perpetuity DCF with the WACC minus g floor of 1.5% enforced. P50 is \$126. Growth and margin are drawn independently but move together through operating leverage, so the true spread is modestly wider.
